# Ring KD769

Ring rotation

Part	Material
Ring	Forged alloy steel
Bolt	Steel

How to order

KD769 - M12  
| TYPE | M

Ultimate load Tons	M	Pitch	E	W	S	B	C	D	A	F	Locking torque Nm	weight kg
											unit : mm	
0.3	M8	1.25	12	44	6	25	8	9	36	25	10	0.1
0.4	M10	1.5	15	44	6	25	8	9	36	25	10	0.1
0.75	M12	1.75	18	52	8	30	10	11	45	33	10	0.2
1.5	M16	2	24	61	10	35	14	13	52	35	30	0.3

M64	36	72	18	36	25.2	18	18	36	27	18

## ※Note

- It can be rotated 360° to adjust the angle with the direction of force.
- The rings are made of wrought alloy steel and are quenched and tempered.
- The rings are manufactured and tested in accordance with the relevant European standard EN1677-1.
- The product is inspected by 100% magnetic particle inspection.
- All forged parts and hex bolts can be traced by quality inspection reports.
- The bolts are UNC threads and comply with US Standard ASME/ANSI B18.2.1.
- The specifications of hexagonal alloy steel bolts comply with the European Union Directive DIN EN ISO 4762.
- Verify that the load is 2.5 times the working limit load.
- The fatigue limit test was performed 20,000 times with a force of 1.5 times the working limit load.
- Only the screw holes are required for the object to be lifted, and the hex wrench is used for installation.

►Obtained a Chinese patent

►Obtained a French patent

►Obtained Australian patent
